# WAWAK®

HOW TO USE A **NEEDLE THREADER**

STEP ONE:
### INSERT THE WIRE LOOP INTO THE EYE OF THE NEEDLE

Holding the needle in one hand and the threader in the other, insert the wire loop into the eye of the needle. For easier insertion, pinch the point of the wire loop before inserting.

STEP TWO:
THREAD THE WIRE LOOP

Insert your thread through the wire loop. Pull the thread through the loop until you have a tail at least a few inches long.

STEP THREE:
PULL THE LOOP AND THREAD THROUGH THE EYE OF THE NEEDLE

Pull the needle threader back out of the eye of the needle and release the thread tail to pull one end of the thread through. If desired, knot one end of the thread for single-thread sewing, or both ends for double-thread sewing.
